The Lin et al. animal model is believed to be suggestive of oral administration in humans even if such administration is not predictable based on the opinion of the Wernsdorfer declaration. Obviousness does not require absolute predictability. Even if at the time of the invention no one was administering arthemether orally in humans, the Lin et al. reference teaches an animal model that is suggestive of oral administration which in the absence of evidence to the contrary may be extrapolated to oral administration to humans. Under an obviousness rejection the claims remain unpatentable as the subject matter is suggested by the combination of references.
